IDENTIFIERS *North Carolina

ABSTRACT

This document contains enrollment data for the 40 technical institutes and 17 community colleges in the North Carolina Community College System for the 1975-76 school year, with comparative data for the 1974-75 and 1973-74 school years. The data are presented in extensive tables and graphs which comprise the bulk of the document. Unduplicated headcount enrollment and average annual full-time equivalent enrollment, by institution, are broken down by program area: college transfer, general, technical, and vocational programs; academic, recreational, and occupational extension programs; learning laboratory, adult basic education, Comprehensive Employment Training Act, and new and expanding industry programs. The data are further divided within institution by quarter. Aggregate annual unduplicated headcount enrollment data are presented by curriculum specialization within each major program area. Student enrollment by sex and race is presented by institution, and in aggregate percentages by type of program. Several tables detail the geographic origin of students by institution, and by home county and curriculum area. A brief introduction provides definitions of terms. (JDS)

* Documents acquired by ERIC include many informal unpublished *
* materials not available from other sources. ERIC makes every effort *
* to obtain the best copy available. Nevertheless, items of marginal *
* reproducibility are often encountered and this affects the quality *
* of the microfiche and hardcopy reproductions ERIC makes available *
* via the ERIC Document Reproduction Service (EDRS). EDRS is not *

FOREWORD

This annual enrollment report of the technical institutes and community Colleges in the North Carolina Community College System is made possible through the cooperative efforts of the staff members of the institutions and the Operations Research and Information Section of the Community College Fiscal Management Division, Controller's Office. With the leadership of Julian C. Wingfield Jr. and the Operations Research and Information Section, each year reporting has been improved.

This information is necessary in budgeting state funds for the support of each institution. Also, by comparing reports for different years, enrollment trends are revealed that serve as guides for long-range planning.

A word of caution, however, is in order. Enrollment in new institutions does not give a true picture of potential because of limiting factors, such as facilities. This means that enrollment statistics, while necessary and valuable information, cannot be taken alone in making evaluation judgements or in long-range planning.

Thanks are expressed to all who participated in the sometimes tedious but always necessary reporting that made this report possible.

Don W. Casper, Director
Community College Fiscal Management

			66, 67

This publication contains enrollment data of the 40 technical institutes and 17 community colleges in the North Carolina Community College System for the 1975-76 school year, summer quarter 1975 through spring quarter 1976. For comparative purposes, the totals for the 1974-75 and the 1973-74 school years are shown on most tables. Prior to 1970-71 the school year was defined as the period from the fall quarter through summer quarter. The tables on pages 11 and 31 show respectively historical student enrollment and FTE data. Distribution of enrollment for the 1975-76 school year is shown graphically on pages 34 and 35.

Sources of Data: There were three source documents from which data was collected. The curriculum and extension enrollment data cards, Form DCC 7-1 and DCC 7-2, completed by each student enrolled in the system provided the number of students enrolled and identified the curriculum or program in which they were enrolled. Each student is counted only one time: see the definition of unduplicated headcount on page 3. The Instructor's Class Report, Form DCC 7-3, provided the number of FTE by major instructional area.

Calculation of Full-time Equivalents (FTE): Since many of the students in the Community College System attend class on a part-time basis, it is desirable to equate them to "typical" full-time students. The full-time equivalents (FTE), representative of the amount of time the "typical" students would attend class, was the means developed to standardize reporting. Several part-time students constitute only one FTE.

One full-time equivalent (FTE) is a student in membership for 16 hours of class, shop, or laboratory per week for 44 weeks, the full four-quarter school year. To determine the average annual FTE, the total membership hours reported for the year is divided by 704. Student membership hours for a quarter divided by 176 produce full-time equivalents for a given quarter.

Terms and Definitions: The definitions shown below describe very briefly the terms used in this publication. Reference should be made to the North Carolina Educational Guide of Technical Institutes and Community Colleges for more detailed information regarding programs offered by the system.

Academic Curriculum Programs include College Transfer and General Education curriculum programs

Academic Education Extension Programs consist of short courses developed to serve the general academic needs and interests of the adult population in the community.

Adult Basic Education Extension Programs consist of classes for adults eighteen years of age or older who lack elementary education (grades one through eight). This program is funded 90 percent with federal funds and 10 percent with state funds.

Adult High School Education Extension Programs consist of classroom instruction, or learning laboratory courses, or a combination of both designed to qualify a student for an adult high school diploma under an Agreement of Affiliation or to prepare him successfully to demonstrate competency in the General Education Development tests and to receive a High School Equivalency Certificate from the State Department of Public Instruction.

Average Annual FTE is the average FTE of the four quarters of summer, fall, winter, and spring for a given year.

College Transfer Education Programs consist of planned academic curricula programs of at least 96 quarter hours of credit leading to an Associate in Arts or Associate in Science degree and designed to allow for transfer to the junior year of a senior institution.

occupational training and basic education for unemployed, underemployed, and disadvantaged persons. The program is a cooperative venture between labor and education. The Labor Department selects both the fields in which training is to be offered and the students to receive the training. The Department of Community Colleges provides the training.

Curriculum Programs include College Transfer, General Education, Technical, and Vocational programs. Special Credit Students are also included in curriculum enrollment.

Extension Programs include Adult Basic Education, CETA (Comprehensive Employment Training Act), New Industry, and Self-supporting Recreational programs in addition to the Regular Budget Extension program areas of Occupational Extension, Adult High School, and Academic Extension.

Fundamental Education Extension Programs include Adult Basic Education, Adult High School, and Learning Laboratory.

General Education Curriculum Programs consist of basic course work in English, literature, fine arts, philosophy, social science, science, and mathematics. They are designed principally for students who desire two years of general education beyond the high school level. Successful completion of 96 quarter hours of credit leads to an Associate Degree in General Education. Fewer hours are required for the Certificate in General Education. Also included in this category are the special credit students (see definition below).

Human Resources Development Programs (HRD) are intensive and unified efforts to recruit, train, and place in employment or, optionally, vocational training chronically unemployed or underemployed adults. The primary objective of the training component is to help the jobless trainee reorient himself or herself to the world of work, appreciate the effects of his or her behavior on others, and develop the basic academic and communication skills prerequisite to obtaining and maintaining employment. Periodic contacts with each trainee for twelve months after training is an inherent function of the Human Resources Development Program.

Learning Laboratory consists of self-instruction using programmed text, audio visual equipment, and other self-instructional materials. A Learning Laboratory coordinator, who is always in the lab, has the function of bringing the instructional media and the student together on the basis of objective and subjective evaluation and of counseling, supervising, and encouraging persons working in the lab.

New and Expanding Industry Programs provide for the training needs of new industries which are moving into the state and also for existing industries undergoing a major expansion which results in the need for additional skilled manpower.

Occupational Curriculum Programs include Technical and Vocational programs.

Occupational Extension Programs consist of single courses, each complete in itself, designed for the specific purposes of training an individual for employment, upgrading the skills of persons presently employed, and retraining others for new employment in occupational fields.

Regular Budget Extension includes Occupational Extension, Adult High School, and Academic Extension programs.

Regular Budget Programs include all programs in the Curriculum (College Transfer, General Education, Technical, and Vocational) and Regular Budget Extension areas (Occupational Extension, Adult High School, and Academic Extension programs). It does not include Learning Lab, Adult Basic Education, CETA, New Industry, or Self-supporting Recreational classes.

which the institution receives no budgetary credit. The cost of such activities are borne exclusively by the participants or some contracting agency.

Special Credit Students are those students who take one or more single courses for credit but who are not enrolled in a regular curriculum program.

Specialty Education is a special subset of occupational extension programs which are offered in the area of ambulance training, electrical lineman safety training, fire service training, fisheries occupations training, forensic science education, hospitality education, law enforcement training, management development programs, and telephone safety training.

Technical Education Curriculum Programs are designed to prepare individuals for employment, and completion of the curriculum leads to an Associate in Applied Science degree. They involve the application of scientific principles in research, design, development, production, distribution, or service. The programs are generally two academic years in length, although some take longer to complete.

Unduplicated Headcount is the number of individuals enrolled in each curriculum or extension program. A student is counted in only one curriculum; therefore, the sum of the enrollment in each curriculum equals the total curriculum enrollment. However, in extension a student is counted in each extension program in which he is enrolled, but he is counted only once in each extension subtotal and extension total count regardless of the number of different programs in which he is enrolled. Because of this method of counting the extension enrollment, the sum of the enrollments in each program exceeds the total unduplicated extension count. Prior to 1971-72, extension students were counted only in the extension program in which they were first enrolled regardless of the number of different programs in which they were enrolled.

Vocational Education Curriculum Programs consist of a series of courses which are designed to prepare an individual for employment in a specific occupation. These programs consist of a sequence of courses which generally can be completed in one year or less by a full-time student. Successful completion of a vocational curriculum program leads to a diploma or certificate.
